

**Diabetic CARE**

# Nutrieeze- A Source for Phytonutrients

‘PHYTONUTRIENTS’ are ‘PLANT BIOCHEMICALS’

- That protect against bacteria, viruses, and fungal infections.
- Decrease risk of developing diabetes, certain cancers, hypertension (BP), and heart diseases.
- Act as anti-inflammatory agents, antioxidants and/or other nutrient protectors.

# Nutrieze Diabetic Care-Mechanism

**Nutrieze Diabetic CARE** is unique in its formulation, especially to repair sugar metabolism and solve the problems associated with absorption and transportation of blood-sugar, which is the typical characteristic feature of diabetes.

**Nutrieze Diabetic CARE's** unique formulation of Dietary & Essential Nutrients:

- **Rich soluble dietary fiber** and **Pure Proteins from plant sources,**
- **Essential Nutrients [9 essential amino acids, 27 vitamins and minerals & fatty acid(s)]**

**Nutrieze Diabetic CARE** is a rich source for Isoleucine & Arginine amino acids which directly activate beta cells of pancreas to produce and to release **Insulin hormone** with immediate action in **Type 1 diabetes**, and shows suppressive action on Insulin Resistance and thereby increases the availability of **Insulin hormone** in the body, both in terms of quantity & quality, in **Type 2 diabetes**.

**Blood glucose control:**

**Nutrieze Diabetic CARE** has a lower glycemic index which helps to keep blood sugar levels more stable, making diabetes much easier to control as they provide good soluble fiber.

# Nutrieeze Diabetic Care-Mechanism

The **Pure Proteins** are essential nutrients required for the growth and maintenance of human body and is the major structural component of all body organs, hair, skin, cellular structure & cell walls in the body, especially muscle. Additionally, protein is needed to form blood cells. Proteins can also serve as a fuel source during starvation.

These **proteins** directly lowers blood cholesterol levels, modestly elevates HDL and decreases triglyceride levels and finally, it favorably affects Coronary Heart Disease risk factors independent of lipid levels such as LDL particle size and blood pressure.

The **Rich Soluble Dietary Fiber** play a vital role in maintenance blood sugar levels by lowering the rate of sugar entry into blood and enable insulin system to function with less stress there by regulates the digestive system and controls appetite.

**The Chromium Mineral** helps to enhance the action of insulin hormone, which is critical to the metabolism and storage of carbohydrate, fat, and protein in the body. And it also helps to prevent an age-related decline in the ability to maintain normal levels of sugar (glucose) in their blood. Chromium was identified as the active ingredient in this so-called "glucose tolerance factor".

# Nutreeze Diabetic Care-Mechanism

## Other Benefits

**Nutreeze Diabetic Care** contains important essential nutrients and cell protective phytochemicals. It supports restful sleep and sleepy-night cell regeneration. This will give a morning wake-up with a feeling of highly refreshed.

**Nutreeze Diabetic Care** has metabolism boosting properties and contributes to improved cell renewal, leaving the body with full of energy and in a better mood. This may increase your productivity.

**Nutreeze Diabetic CARE** provides high quality protein as well as essential fatty acids with minimal amounts of saturated fat.

## Weight control:

Nutreeze low in calories and high in nutrition. When Nutreeze replaces higher-fat foods, it reduces the overall fat, calorie and cholesterol content of the diet.

Nutreeze is a wonderful addition to any diet- they taste great, are high in protein, and are easy to use.

Nutreeze can also help manage diabetes as well as some associated health problems.
